What will happen to non-functional nodes? Like earlier, there are still a lot of things that have not been automated yet. There are changes in English etc. This is the first step.

Yes. This is the first step. Because in the grounding knowledge, the feedback is still very manual.

It has not been automated as much as we want. Because this is a very basic thing. I am already doing it on Zoho.

The production part is not happening on our software. But the rest of the parts, like finance, dispatch, all these things are happening on Zoho. Because that is all manual.

That is why I am going to give you a full overview on Zoho tomorrow. In which I will give you the access to share your knowledge. If you study it a little, you will get an idea of what is the big point.

Whatever we have to solve, we have to automate it. So that neither my knowledge nor the knowledge of other people's systems work. Right.

Now we have to get involved. There is a lot of work. Right.

Thank you. So, if you want to connect online like this, how do you connect after 12? No, not at any time. That is, after 8-9 o'clock.

That is, after 8-9 o'clock. No, we connect at night. After 12 in the day.

Yes, a little from home. Yes, a little from home. What are your timings? I mean, I don't connect after 7 o'clock.

I have a whole night. 7 o'clock means 7-4 o'clock. You have a lot of confidence.

A lot of confidence. See, I wanted you to connect with me tomorrow. So that whatever changes you make, I will get all the numbers done.

Right. Right. Right.

Right. Right. Right.

Right. Right. Right.

Right. Right. Right.

Right. Right. Right.

Right. Right. Right.

Right. Right. Right.

Right. Right.
