I have completed all the five phases. I just need to do some tweaking. First of all, you pass this on tomorrow.

Pass it on the second day. Today is the first day. After that, I will do some implementation.

In the beginning, I will go and do it myself. I will put it myself and see what problems I have. So that there are no problems.

As I want. Now, we will make a new gate pass. We will save it.

Then, where will that gate pass go? There are three phases of gate pass. The first phase is delivered. The second phase is received.

There are two phases. Delivered and Received. You can see that in the manual.

It is received from there. It is signed. It is physical.

It is kept in a booklet. It is given. It is signed.

I want to scan it. Like the day delivery. Mr. Salim scans it with his mobile phone.

I want to make this process seamless. It is very difficult. How to put it? How to put it? We will put a code behind it.

It will be verified from there. He should open the gate pass. The entry gate pass.

Click on Gate Pass. Click on Delivered. This is a very good thing.

There is a client. There is an error. They have two gate passes.

They will ask us. Our receipt. If they enter manually.

Our receipt will not be there. It will be there with their sign. They will come to you.

The proof will come. To show the client. The receipt will be there.

I can see it. I can see it. It has to be approved manually.

It has to be approved manually. The most previous video. in and out.

Right now, we are making a file but I don't want to see it. If you want to upload it, for proof, you can check it. No, no.

There can be a miscommunication. We should have some answers. We should have some answers.

Right. How do we scan it? How do we upload it? How do we upload it? How do we scan it? You have to open the web browser. No, no.

I was so scared. I removed your gate pass and scanned it. I left it.

Who? The gate pass came out from our system. The gate pass came out from our system. We don't have a booklet for the gate pass.

Do you want me to remove it from here? Remove it from here. I don't want you to remove it. I am generating a small QR code and the gate pass came out.

Okay. Then what happened? Look at this. This is our gate pass.

I have made a group. Look at this. Look at this.

15 cartons. 15 into 1 carton. Now sign it.

Now sign it. Now copy the carton below this. Now copy the carton below this.

This is our booklet. We will give the carton to the car. We will give the carton to the car.

Remove the carton and sign it. Now this is the receipt. Now this is the receipt.

Tomorrow there will be some discrepancy. They reject it. We can show it with the sign of the person that this date was signed by that person.

Later on, there will be some discrepancy. Okay? Now, I want that this is not important. This gate pass was made by Mr. Salim.

He is our manager. So, close this thing. What about this? Either upload this picture and share it with all our friends.

Or remove this from the system. Earlier, I removed one thing from the system. But now, I will do it.

This is Mr. Salim's job. Whatever gate pass was made on the system, he searched it. There was a QR code near the gate pass.

Mr. Salim scanned it. He will open the QR scanner. He will send the picture.

It will be uploaded here. How? This will be sent directly. How will it be sent? It won't affect.

QR scan was done. How was the scan done? With the mobile. With the mobile.

Mobile opened Google. On Google, a family of ERP was opened. Mr. Salim didn't have to do anything.

He just had to send the picture. With Mr. Salim, the camera was opened twice. Mr. Salim didn't have any complexity.

Yes. He scanned it. After scanning, it was loaded.

Our panel was opened. Our panel was opened. He said, upload the picture.

He said, upload the picture. Mr. Salim saved it. Here, I don't know.

I don't know. Now, I want to tell you When we were delivered, he got the physical gate pass. He went back to the gate pass.

On the right, there was a QR button. He pressed it. A link came on his mobile.

A link came on his mobile. He directly came on Google. How could it be possible? I clicked on the photo from the other side.

How could it be possible? Scan QR code. He scanned on the QR code. He scanned using the APP.

He pressed the button and clicked and upload it directly to you. This is it. So that you don't have to open the web page again and again.

It will take a long time. Ok. Is this flow correct? Or should I make it a little easier for you? What can be easier than this? Do you have it in your mind? Is there anything easier than this? The easiest thing I have done in the latest feature is this.

This is the easiest. This is the easiest. I have told you that this is very easy.

You can download all the images in the app. You can open any gate pass. It's correct.

It will be linked with the client. You can directly connect the client. You can get the details of which delivery you have done.

How many people are there with you? How many people are there? You know that. Cloud storage is not available now. Cloud storage is available for lifetime.

You can do that on maintenance. We will keep updating you every month. That how much load is coming, how much you need to increase.

If you say that the system is stuck or anything is happening. Then how to get it cleared. Or if you want to upgrade the storage in the system.

Then you can do that. We will send you the server configuration of the system. Which is standard.

100 GB storage. 4 GB RAM. And the server has 2 ports.

You can do something about the domain. I will make a domain. I will link it.

Which domain? I told you that domain. TechnoCorp. TechnoCorp.

ERP ERP. That will be done for you. It will be done for you.

TechnoCorp is different. TechnoCorp is different. Only the company is active.

TechnoCorp's emails. That will be done. Our emails will be done.

TechnoCorp.com will be done. I just need a small domain. Software.

Which will run on ABC.com. Which will run on whatever you want. It will run on any domain. If you don't want to update, you can stop the live.

No. We will do it. I have a message.

And you said you don't want to make a bot. TechnoCorp is already running. Oh.

I have a domain. What do you want from it? Our IP is outsource. This is DNS.

I will give my IP. I will give the IP address of the server to him and he will give the IP address of the server to me and I will be connected to the server.
