Is there anything else related to production that you want to tell us? No, the primary thing is this. The main thing is that I want every month to have a sheet to record all the expenses. In which we can cash out all the expenses.

For instance, all the ledgers are made with time. One is the company's expenses. Cash in hand.

Yes, cash in hand. If not cash in hand, at least inflow and outflow. Every month of the company.

For instance, we are sitting on 31st of March. How much will the company cash out throughout the month? And in which months? Now what we do is, whenever we give a cheque, either cheque payment or cash payment, the voucher is ready immediately. So the record is of everything.

But it is a manual record. The person who is giving cash on the voucher, he comes and signs where it is received. If someone has to give a cheque, the person comes.

If there is a vendor or someone else, they come and receive the cheque. We give the receipt and file the voucher. And at the end of the month, we total the payment.

I want that also to happen. I was online once. Similarly, the voucher system is also online.

They have put the voucher. Who has to give the cash? Electricity bill payment. Salary of the paper.

Rent of the factory. The vendor who bought the grain. The vendor who bought the cotton.

Small things came on the tape. Some repair and maintenance machine came. So there are vendors for everything.

So we write the electricity payment for machine repair. We put the title of this voucher. We have already put the title of the input manual in your app.

In the web app. We put the date. We put the description of which month.

That brother, machine repair and maintenance. Or the meter is broken. I put the money.

Save. I save. A voucher is ready.

Basic voucher is ready. Assume that the voucher will be ready when the person will come. Or the cash will be out.

Now he has gone to the company's cash out. That day. Automatically.

The whole month has passed. It has totaled in the system itself. Cash out.

The day the grain came. What should I put on that day? It comes on the cash of the grain. Assume that I have taken 50 lakhs of grain.

500 lakhs. So I put. LDP.

LDP Purchase. Do not put the name of the vendor. Put the date.

How many bags did you do? At what rate did you do? According to 10,000 rupees. If I do 500 bags. It will be 50 lakhs.

I did 10 lakhs. From this account. 50 lakhs have been debited.

Transfer it. Or we gave him a cheque. Save.

Automatically. It has already ended in the cash out. And this voucher has also been saved.

The entire ledger credit debit is being maintained. You are saying that I keep it separate. The client is like this.

Yes. There is no difference in the company expense of the client. This is the company expense.

Now what is the cash inflow? Which the client is giving us. Whether the client is making old payments. Or recent payments.

Just the payment is coming. We have to do it manually. No problem.

We can do it manually. But as soon as the client gives the inflow. Its ledger gets adjusted.

I understood what you are saying. Alkaram gave me 20 lakhs. Alkaram has 1 crore.

Alkaram gave 21 March 20 lakhs. Assume 3 days later. So as soon as 20 lakhs comes.

We input 20 lakhs manually. Automatically Alkaram's ledger will be written. Basically for the inflow.

We will give a screen. In that. The types will be coming.

Time sign. Time name. Everything will be coming.

And there is a way to generate a new client. Because from now on, new clients are also coming. You can generate a new client.

You can generate a new ledger. The outflow. It is not only related to the time sign.

It is becoming a voucher. Even if I spend 1 rupee. My director's lunch also comes.

So it becomes a voucher for that too. If I order a sandwich for 2000 rupees. Then the sandwich

comes from Zendure for 2000 rupees.

Then the sandwich will go to the director's expense. It is the same. Automatically expense.

Because there is a company expense. Yes, there is an expense. There is an expense.

Basically it is for 2000 rupees. But it is there. And it is written in the category of director's expense.

One is factory expense. Then if we had taken the investment. Then we would have given lending or dividend to everyone.

So if someone has given 1-4 rupees. And suppose he is a shareholder. Or he is my partner.

He took out lakhs of rupees. Then it becomes the director's expense. Or director's shareholder.

Compensation or dividend. We just write the title of that. Write 1-4 rupees.

Write the day of the college. Save it. Outflow is there.

It came out of the company's money. So the report will be maintained. That 1 crore was there in the beginning of the month.

Till now no info has come. Suppose this month. On 31st, 40 lakhs are left.

So where did 60 lakhs go? Exactly. That old info has come. Whether it was spent on 1000.

It was 1 rupee. Or it was with 60 lakhs. Right.

One voucher is left. Which we have to import manually. Put the title.

Put the description. On which day it was. How much it was.

Ok done. Save it. Voucher is also saved in the cloud.

And we can make the category of voucher. We have 3-4 categories. Head office.

Directors. Factory. We were doing charity.

It has a separate one. Because often we are doing. So suppose there was a payment for charity.

So you selected charity within 10 minutes. Whatever money you put. Put the description.

Put the title. Save it. That cash outflow was also saved.

But the category was charity. So at the end of the month. There are different categories of it.

That 60 lakhs were spent. Directors took so much. I found something.

I need it. My company. I took out 2 lakh rupees.

Right. Now I want the voucher to be saved. I took it out.

And in the end of the month. In the expense. In the total expense.

It should be written. That I took out the money. It should come directly in the expense.

2 lakh rupees. It should come in charity. 5 lakh rupees.

In the factory. Keep coming. Keep coming.

Electricity payment. Labour service. Everything came in the direct cost of the factory.

40 lakh rupees came in the factory cost. In which month. It should come.

That everyone's voucher was saved. Right. I gave a dividend to someone.

Returned the loan to the bank. It should be written. So we will make those categories.

And it is our wish. We can add the category. That's right.

I have the option. That I will add the category. You will see.

I will add the category. Right. If you want to make a new category.

I will add it. Right. If you want to make a new category.

I can add it. You teach me that. Right.

I will do it. I will do the finance. I will do that.

So in that. Whatever vouchers you are making. So we will give you the option.

That you create the voucher. And after that. According to you.

See the fields. Which field to keep in it. What to keep.

What to keep. If there is a client. Then the client's basically drop down will be coming.

Which client do you want to select? If someone is being made of meter. How much to buy grains. Category of grains.

Exactly. That we make 10 types. Right.

So we are coming. Everyone has their own name. I will tell you the name.

It is on sale. If there is a grain. Then the category of grains.

You will see all the categories in it. The category of three grains is coming. Right.

You will select. If this rate is this much. Then that voucher will be given.

Right. Right. Now see.

You will not make a perfume once. Right. You will make a demo.

I will do it right. I will give you some advice. Then you will improve it further.

Exactly. Right. It will be processed 3 to 4 times.

Your 90% flow. If you take it as a school management system. Have you heard the name of The Benchmark? The Benchmark School.

So we were working with them. So basically your accounting. The whole module.

So it is exactly. Exactly. Same to same.

It is like a benchmark. That they used to say. If one rupee is also going out.

They basically had a cash in hand system. If any janitor staff is going. Basically.

Yes. That system. You will have a category.

You can set it accordingly. If one rupee is also going. Someone is coming with a tea of 100 rupees.

Something is happening. Everything is happening. So it is a whole ledger.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. Yes.

Yes. Yes. I need voucher approval, but I set a limit that if there is a single voucher above 2 lakhs, it is on my approval, if there is a single voucher below 2 lakhs, it is on my approval, so they keep saving, I keep looking here, because I always see that they are taking money out of the voucher, because my cheque has been signed many times, because sometimes I travel here, sometimes I come here, if they need money, then what will they do, without my cheque, money will not come, so the company cannot stop me, so I sign the cheque and give it to them, they know that if there is a big payment, they take my prior approval, but if there is a small payment, 5,000, 10,000, some small amount, which is not going to happen, so they just confirm me, I say ok, and the payment goes on the voucher, but the voucher is made, and then I sign the voucher for the whole week, from Monday to Friday, sitting all Friday night, what will be the expenses for the whole week, but when the voucher comes in the system every time, so I am at home, the system is on, I can check that there is a payment, which will automatically pop out in the voucher, if you approve it, then it will be approved from there, it will be approved by your name, or if there is a stamp, it will be stamped, that can also be a way, so whether it is there or not, I can see, I know which voucher has come out, if the voucher has come out, it means the payment has gone, either in the form of cash, it is written, cash or cheque, there is a category in the voucher, cash or cheque, if it is cheque, then the cheque number is written, we put the voucher, it is written in our shop, name, title, description, money, date, company name, because we have 2-3 companies, so we are seeing from which company, because it is a raw TV account, it is a fixed TV account, so we are seeing that a particular vendor has made a payment,

so which company's cheque did you give, is it the raw vendor's cheque, or is it the fixed one, because the fixed one's taxation is different, so we put it in the dropdown, there are 2-3 companies, so do this and start working from today, so I will keep telling you, Inshallah, I will provide you the document first, you approve it, How long will it take to complete the deployment? It will take at least 2 weeks, and I am telling you that it will take 2 weeks to complete the deployment, but if your requirement changes, changes keep happening, so according to that, it may take more than 2 weeks, but before that, I have talked to a company in Lahore, there are 2 companies in Islamabad, there are a lot of companies in Karachi, so this work has become very common, there is no rocket science left, and people have customized, I will just customize them a little and deploy them in people, I know all this, but because there are so many things, this is a headache for me, you have a company, you have a livelihood, you do this, I have no objection, do it according to me, try the money properly, because I am from this field, I know how many people you have hired, I know everything, so do it properly, you are looking good, my age is much older than you, my younger brother is your age, so he is also an employee of my company, so do it properly, I will not talk about the money now, it is a discussion for later, but I hope you will do it properly, earn money, earn profit, but do it properly, and use it, the user interface should be great, it should be app friendly, mobile friendly, web friendly, it should be smooth, seamless, and I will need 5 or 6 windows, because I will use all the heads, I will not access all the employees, the head zone, whether it is production head, HR head, finance head, marketing head, everyone will have access, not every employee will have it.

I will give you a module in it, that super admin should create a role, marketing you created a role, you selected a module in it, that this person should see finance or not, this should be seen or not,
