You go to number of bags stored in inventory. Sanjeev is purchasing a bag. Will the process run on mobile too? Yes, it will run on mobile too.

Here, I purchased a bag. Now, I go to number of bags. Here, I purchase a bag.

Now, I go to number of bags. Here, I purchase a bag. Here, I put my money.

I put my money here. I take it out. I put it here.

And in here I put my fee. I take it out. I will tell you how much money I took.

Okay. This was what I purchased. The bags that are being consumed from the inventory Here you can see how many bags are being consumed There are so many bags of grain You can see the threshold In the rest of the production You can see in the comprehensive report How much was the purchase You can also see in the points You can also see in the charts These are the points You will not have the charts Because the report is very small You can get an idea of all these things The entry of TIFO Where we are getting the data You can solve it And the most that I have shown you Was this entry Here The unit consumed The rate of unit The electricity cost The unit is being consumed manually No, what is happening is that when we started the production, we took the starting minute We don't want any more selling bads we don't want any more we don't want to see any more we don't want to see any more super admin level we want a lower level where we can see this The one note club you can go to after finance head there will be a finance tab after production head there will be a sales page there will be a gate pass even if it is made, it won't be seen it will be seen how many meters were there how much was the gate pass if you get an order from here, the order will be approved right now the order is pending and how much percent you have delivered it it is coming here because of multiple deliveries it doesn't go all at once, sometimes it goes in tons from here like if it was 5, 100, 14, then you can update in this order, you will know how much percentage went up there are multiple packages, you can make multiple packages I went to give access, but I couldn't because it is a free version have you studied Zoho Inventory? no, I haven't studied Zoho Inventory here I have created a gate pass from here I have selected Alcaron and here I have all the orders Alcaron has made me repeat the order once you make an order, then Alcaron will make another order as soon as the order is being fulfilled, it will be updated as soon as the order is being fulfilled, it will be updated Alcaron has made this order
